Emerging Markets (EMs) consist of:

Latin America: Argentina, Brazil, Chile, Colombia, Mexico, Peru.
Emerging Asia: India, Indonesia, Malaysia, Thailand, Philippines, Vietnam.
EMEA: Hungary, Poland, Saudi Arabia, South Africa, Türkiye.
Greater China: China, Hong Kong, Macau, Taiwan, and Red Chip companies (issuers headquartered in Greater China but incorporated elsewhere).

S&P Global
Ratings

Key Takeaways

Escalation in the Middle East conflict could drive oil prices higher, impacting EMs more severely than advanced economies due to energy's larger share in their consumption basket. If oil prices take another leg higher, this could likely delay interest rate normalization in some EMs.

China's stimulus measures, including monetary easing and property market support, aim to boost sentiment and growth. However, weak credit demand limits their impact, with growth prospects hinging on the extent of additional fiscal stimulus.

Uncertainty surrounding U.S. elections heightens key risks for EMs that could tighten financing conditions and increase borrowing costs and inflationary pressures.

We expect faster growth in most EMs by 2025, especially in Southeast Asia, as U.S. rate cuts boost economies with strong fundamentals. Policy-related risks in LatAm may limit capital inflows despite lower U.S. rates.
Credit conditions for EMs issuers remain favorable if the U.S. soft landing holds. However, rising protectionism, China's slower growth, and tensions in the Middle East could disrupt trade, energy prices, and monetary easing efforts.

Financing conditions welcomed Fed easing as government yields fell, corporate spreads compressed, especially among speculative-grade entities, which issued a record of $4.8 billion in the month. Cumulative corporate issuance in 2024 is now even higher than record levels in 2019-2021. However, mounting regional political and macroeconomic uncertainty, coupled with significant geopolitical risk, could translate into further bouts of market volatility, as was the case in August.

The Middle East Conflict | Energy Prices Have A Higher CPI Weight In EMs

Energy weight in consumer price indices (%)

- **The potential for energy prices to increase further threatens to disrupt the disinflation process in EMs.** Brent crude prices have been highly volatile this month, at one point reaching $80 per barrel. However, it's still below last year's average of $82 per barrel. If the Middle East conflict continues to escalate, risks of a further increase in oil prices will remain high.

- **Higher energy prices have a larger impact on inflation in EMs than in advanced economies.** This is because energy makes up a larger share of the consumer basket in EMs than in advanced economies (see chart).

- **If energy prices head higher, EM central banks may have to recalibrate monetary policy.** This could mean a slower interest-rate normalization in most EMs.

Sources: Haver Analytics and S&P Global Ratings.

China | Fiscal Stimulus Is Key For Growth Outlook

Policymakers introduced monetary policy easing measures
Sources: Shanghai Stock Exchange, People's Bank of China, and S&P Global Ratings.

- **Policymakers in China introduced a wide range of stimulus measures since September 24 to lift sentiment and support growth.** Measures include monetary policy easing, and support for the property market and equity markets.

- **These measures supports consumer and business sentiment.**

- **However, weak credit demand means that monetary policy easing won't significantly boost growth.** The change in the growth outlook will depend on the scale and nature of additional fiscal stimulus measures.

U.S. Elections | Uncertainty Heightens Key Risks For EMs

U.S. elections 2024: What's at stake for credit

Risks to credit

- Financial-market volatility, especially if result of presidential election is unclear or in dispute

- Political polarization and policy uncertainty

- Could generate a wait-and-see investment climate, hurt business and consumer sentiment, and reduce economic activity

VIX measure of equity market volatility tends to increase during U.S. presidential elections

Legend: 2012, 2016, 2020, 2024
Policy areas to watch

Fiscal policy

We don't expect meaningful federal deficit reduction regardless of outcome, given pledges not to reform mandatory spending

We view the CHIPS Act, IRA and infrastructure spending as less likely to change given some areas of bipartisan support

Expiry of the TCJA at end-2025 opens the possibility for changes in tax regime

Trade policy

More trade restrictions—specifically, higher tariffs—could result in inflationary pressures, especially for sectors exposed to cross-border supply chains

We expect U.S.-China tensions to remain irrespective of the outcome of the election

Regulation

M&A may become more active if regulatory hurdles lessen for large business combinations

Uncertainties around energy and climate regulations could affect relevant sectors.

Financial regulation could be affected over time

VIX is through Sept. 20, 2024, and sourced from S&P Capital IQ Pro. Source: S&P Global Ratings.

Key factors to watch for EMs:

- **Higher financial market volatility often strengthens the U.S. dollar.** This could tighten financing conditions and increase inflationary pressures on EMs through foreign-exchange pass-through effects.

- **Sustained fiscal stimulus in the U.S. could result in economic overheating that could prevent further monetary easing.** It could also cause long-term U.S. treasury yields to rise, which usually also increases borrowing costs in EMs.

- **More protectionist trade policies and any international responses will likely result in inflationary pressures and dent China's economic growth**, with negative spillovers to other EMs.

Economic Outlook | Lower Interest Rates Help As Pockets Of Risk Rise

GDP growth rates (%)

Legend: ■ 2024f ■ 2025f ● 2024 revision ● 2025 revision

Categories grouped as: LatAm (Argentina, Brazil, Chile, Colombia, Mexico, Peru), EM Asia (China, India, Indonesia, Malaysia, Philippines, Thailand, Vietnam), EM EMEA (Hungary, Poland, Turkiye, Saudi Arabia, South Africa)
Source: S&P Global Ratings.

- **We expect most EMs in our sample to post faster growth in 2025 than in 2024,** but we anticipate significant divergence across EMs in the coming quarters.

- **The Fed's rate cuts will benefit EMs with strong growth fundamentals, such as those in Southeast Asia, as they will attract greater capital flows.** However, in some LatAm economies where policy-related risks have risen, the associated increase in risk premiums due to lower policy visibility could reduce capital inflows, despite lower U.S. interest rates.

- **Key downside risks** include the implications of the U.S. election outcome on trade and fiscal policy, a more rapid-than-expected slowdown in the U.S., ongoing economic weakness in China, a further escalation of the Middle East conflict, and persistent uncertainty over domestic policies. (see Economic Outlook Emerging Markets Q4 2024: Lower Interest Rates Help As Pockets Of Risk Rise published Sept. 24, 2024)

EM Credit Conditions | Risks Loom Amid A Fragile Stability

Top Emerging Markets Risks	Risk Level*	Risk Trend**
A deepening property crisis, weak confidence, high debt levels, and trade tensions slow economic growth for China.	High	Worsening
Geopolitical tensions and difficult socio-political conditions erode credit fundamentals.	High	Worsening
Increasing Protectionism disrupts global trade.	Elevated	Worsening
Higher interest rates linger upon a sudden stop of monetary easing in the U.S.	Elevated	Unchanged
A sharper-than-expected downturn in advanced economies weighs on global trade.	Elevated	Unchanged
Weaponization of supply-chain choke points drive up corporate costs and inflation.	Elevated	Unchanged
Structural Risks		
Climate change and more frequent natura disasters.	Elevated	Worsening

Sources: S&P Global Ratings. * **Risk levels** may be classified as moderate, elevated, high, or very high. They are evaluated by considering both the likelihood and systemic impact of such an event occurring over the next one to two years. Typically, these risks are not factored into our base case rating assumptions unless the risk level is very high. ** **Risk trend** reflects our current view about whether the risk level could increase or decrease over the next 12 months.

- **Credit conditions will likely remain supportive for EM issuers as long as a soft landing continues in the U.S.**

- **Nevertheless, several trends could derail the favorable conditions:**
  - Increasing protectionism could disrupt global trade and interrupt monetary easing as inflationary pressures resume.
  - China's economic growth could slow further upon continued real estate weakness and growing trade tensions.
  - If the Middle East conflict escalates to a dangerous phase, it could further disrupt supply chains and weigh on energy prices.

Regional Economic Highlights

EM Asia Economics | Slowing Manufacturing Activity

Vishrut Rana
Singapore
+65-6216-1008
vishrut.rana
@spglobal.com

- **The Purchasing Managers' Index (PMI) readings in EM Asia have moderated in August and September.** The change is more pronounced among the electronics producers in the region, with high-income East Asian economies also showing the same pattern.

- This is in line with national account trends this year, given that service sectors have broadly stronger growth than manufacturing.

- **The electronics sector has been relatively strong among manufacturing subsectors.** Despite the cyclical slowdown, the medium-term trend is still favorable, given resilient electronics demand.

### Purchasing Managers' Index Readings Eased in September

EM EMEA Economics | Exchange Rates Support Disinflation

Valerijs Rezvijs
London
+44-7929-651386
valerijs.rezvijs
@spglobal.com

- **Exchange rates have strengthened in EM EMEA.** The Fed and the European Central Bank's easing as well as the improvement in current account dynamics, have supported exchange rates in several EM EMEA economies. However, the recent U.S. employment report seems to have tempered market expectations with regards to upcoming interest-rate cuts, which caused some correction in exchange rates.

- **South Africa's rand rallied in the past two months,** hitting its 21-month high against USD. Historically, the rand has been strongly correlated with Fed developments, and we expect that this will remain a key factor in short-term exchange rate fluctuations.

- **The Turkish lira has stabilized.** High interest rates, as well as current account improvements have supported the lira in the last few months. However, we currently expect the exchange rate to weaken, as soon as the central bank resumes cutting rates.

Exchange rates against the dollar, index (May 2024 = 100)
Note: Higher index imply strengthening against USD. Sources: Haver and S&P Global Ratings.

LatAm Economics | A Long Road To Normalizing Monetary Policy

Elijah Oliveros-Rosen
New York
+1-212-438-2228
elijah.oliveros
@spglobal.com

- **Most central banks in LatAm will continue lowering interest rates in the coming months.** Inflation continues to moderate, and the Fed's easing cycle will open space for lower interest rates in the region.

- **Brazil is the main exception, where we now expect more interest hikes at least in the next couple of meetings.** The Brazilian central bank pivoted to rate hikes last month due to an uptick in observed and expected inflation. The central bank has two more meetings this year, and we expect rate hikes following both meetings.

- **The shift from a restrictive to a neutral monetary policy stance will be a long process in LatAm.** In most cases, by the end of 2025, even as central banks continue easing policy, real interest rates will remain above long-term averages. It may not be until 2026 when interest rates are back to neutral.

One-year real ex ante policy rate (%)
Note: the one-year real ex ante policy rate is the current policy rate minus 12-months ahead CPI expectations. Sources: Haver Analytics and S&P Global Ratings.

Monetary Policy/FX | Several EMs Followed The Fed With Rate Cuts

Country	Policy rate	Inflation target	Latest inflation reading	Latest rate decision	Next meeting	Sept. exchange rate chg.	YTD exchange rate chg.
Argentina	40.00%	No target	209.0%	Hold	N/A	-1.9%	-16.7%
Brazil	10.75%	3.0% +/- 1.5%	4.4%	25 bps hike	Nov. 6	3.8%	-11.1%
Chile	5.50%	3.0% +/- 1.0%	4.1%	25 bps cut	Oct. 26	2.4%	-1.3%
Colombia	10.75%	3.0% +/- 1.0%	5.8%	50 bps cut	Oct. 31	-0.8%	-8.2%
Mexico	10.50%	3.0% +/- 1.0%	4.6%	25 bps cut	Nov. 14	0.0%	-13.9%
Peru	5.25%	1.0% - 3.0%	1.8%	Hold	Nov. 7	1.2%	0.0%
China	1.50%	3.0%	0.6%	20 bps cut	N/A	1.1%	1.3%
India	6.50%	4.0 +/- 2.0%	3.7%	Hold	Dec. 8	0.1%	-0.8%
Indonesia	6.00%	2.5% +/- 1.0%	1.8%	25 bps cut	Oct. 16	2.2%	1.9%
Malaysia	3.00%	No target	1.9%	Hold	Nov. 6	5.1%	11.8%
Philippines	6.25%	3.0% +/- 1.0%	1.9%	Hold	Oct. 17	0.7%	-0.6%
Thailand	2.50%	2.0% +/- 1.0%	0.6%	Hold	Oct. 16	5.2%	6.0%
Vietnam	4.50%	4.0%	2.6%	Hold	N/A	0.5%	-0.9%
Hungary	6.50%	3.0% +/- 1.0%	3.0%	25 bps cut	Oct. 22	-0.1%	-2.4%
Poland	5.75%	2.5% +/- 1.0%	4.3%	Hold	Nov. 6	1.2%	3.0%
Saudi Arabia	5.50%	No target	1.6%	50 bps cut	N/A	0.0%	0.0%
South Africa	8.00%	3.0% - 6.0%	4.4%	25 bps cut	Oct. 17	2.9%	8.6%
Türkiye	50.00%	5.0% +/- 2.0%	49.4%	Hold	Nov.21	-0.6%	-13.7%

Note: Red means inflation is above the target range/policy is tightening/exchange rate is weakening. Green means inflation is below the target range/policy is easing/exchange rate is strengthening. A positive number for the exchange-rate change means appreciation. Argentina's central bank no longer targets inflation, nor does it set the policy rate directly (it is set based on monetary aggregates targeting). For China, we use the PBOC's seven-day reverse repo. bps--Basis points. YTD--year to date. N/A--Not applicable. Sources: Haver Analytics and S&P Global Ratings.

- Change since peak of 2022

Countries (x-axis): Brazil, China, Malaysia, Vietnam, Thailand, Colombia, Turkiye, India, Chile, Hungary, Indonesia, Poland, Mexico, Peru, South Africa, Philippines, U.S.

Turkiye "Change since end of 2019" value labeled: 1,463

Data as of Sept. 30, 2024. Note: The selection of country is subject to data availability. Y-axis truncated at 700 bps for visualization purposes.
Sources: S&P Global Ratings Credit Research & Insights, S&P Capital IQ Pro, and Datastream.

- **EM 10-year benchmark yields decreased across the board,** except for Brazil (+22 bps) following the central bank's 25-bps hike of its Selic rate to 10.75% to curtail accelerating inflation, following stronger-than-expected economic activity. Major downside movements were in the Philippines (37 bps), as inflation retreated on the slowing increase in rice prices, and South Africa (35 bps) given the central bank's first interest rate cut in more than four years, as strong domestic growth overshadows global vulnerabilities.

- **The Fed's easing signals potential monetary easing across EMs, likely aiding capital inflows and further compression in yields.** However, mounting regional political and macroeconomic uncertainty, coupled with significant geopolitical risk, could translate into further bouts of market volatility, as was the case in August.

EM Credit Spreads | Compression Is Not Over

X-axis: Feb 22, May 22, Aug 22, Nov 22, Feb 23, May 23, Aug 23, Nov 23, Feb 24, May 24, Aug 24
Data as of Sept. 30, 2024. bps--Basis points. IG--Investment-grade. SG--Speculative-grade. Sources: Refinitiv, ICE Data Indices, and Federal Reserve Bank of St. Louis, S&P Global Ratings Credit Research & Insights.

- **EM corporate average spreads recorded 184 bps** in September, a tad lower than in August. Corporate spreads are 60 bps lower than in the beginning of the year, with LatAm narrowing the most, by 80 bps.

- **Speculative-grade spreads fell again more than investment-grade ones.** The distance between U.S. and EM spreads remained minimal: only 2 bps differentiating investment-grade spreads (versus four-year average of 18 bps) and the U.S. speculative-grade spreads only 21 bps lower than those of EM ones (versus the four-year average of 161 bps), confirming market appetite for EM corporate debt.

- **Tight spreads buoyed speculative-grade issuance,** which posted its strongest monthly activity since January 2021, evenly split between financial and nonfinancial corporates, mainly located in LatAm. The market was notably open to 'CCC' rated corporates, which issued at average 8.4% with seven-year average tenor for refinancing purposes.

EM | Financial And Nonfinancial Corporate Issuance

- **EM issuance in September decreased 19% from the August level to $180 billion** because entities in Greater China issued $150 billion, 26% lower than the last month's significant market activity. Banks, brokerages, and metals, mining, and steel entities were mostly active while volume among insurers and utilities held up.

- **Issuance excluding Greater China posted the strongest volume month in the year,** rising to $29 billion from $12 billion in August. Such a monthly volume was last seen in January 2020. If Brazil is still lagging, Mexican, Polish, and Argentine corporates were very active. It was mostly financial and utility-related issuance.

- **Cumulative corporate bond issuance is now higher than strong volumes in 2019-2021**, as issuers tapped the market to refinance their near-term maturities at a cheaper, yet still elevated, cost. Region-wise, after nine months in the year, EEMEA's year-to-date issuance was 212% of its 2016-2023 average, followed by Greater China (106%), LatAm (95%), and EM Asia (69%).

EM cumulative corporate bond issuance (bil. $)*

Ratings Summary

Ratings Summary | Sovereign Ratings In EM 18

On Sept. 13, 2024, we revised the outlook on Saudi Arabia to positive from stable, reflecting that its wide-ranging reforms and investments will underpin the development of the non-oil economy while upholding sustainable public finances.

■ Investment grade   ■ Speculative grade

Economy	Rating	Outlook	Five-year CDS spread (Sept. 30)	Five-year CDS spread (Aug .31)
China	A+	Stable	60	57
Chile	A	Negative	55	51
Saudi Arabia	A	Positive	62	55
Malaysia	A-	Stable	38	38
Poland	A-	Stable	70	63
Philippines	BBB+	Stable	58	58
Thailand	BBB+	Stable	36	36
Indonesia	BBB	Stable	69	67
Mexico	BBB	Stable	120	114
Peru	BBB-	Stable	77	73
Hungary	BBB-	Stable	118	115
India	BBB-	Positive	50	46
Colombia	BB+	Negative	199	180
Vietnam	BB+	Stable	97	99
Brazil	BB	Stable	152	151
South Africa	BB-	Stable	176	182
Turkiye	B+	Positive	266	273
Argentina	CCC	Stable	2,187	2,484

Data as of Sept. 30, 2024, and sovereign ratings as of Oct. 5, 2024. Foreign currency ratings. Red means speculative-grade rating and blue means investment-grade rating. China median rating includes China, Hong Kong, Macau, Taiwan.

Ratings

EM | Total Rating Actions By Month

- **There were three upgrades in September, down from seven in August.** Notably, Rede D'Or Sao Luiz S.A. (Brazil; healthcare) was upgraded to 'BB+' from 'BB' as it continues to increase the scale, scope, and diversification of its hospital operations, with stronger liquidity and credit metrics. Moreover, seven of the nine monthly positive outlook revisions occurred among corporates in Saudi Arabia, which followed the sovereign outlook revision. Many of these revisions concerned financial institutions.

- **Three downgrades in September, in line with the August level.** Operadora de Servicios Mega, S.A. (Mexico; NBFI) defaulted from 'CC' on missed interest payment on its unsecured notes due 2025. Azul S.A. (Brazil; transportation) was downgraded to 'CCC+' from 'B-' as the depreciation of the Brazilian real and a reduction in capacity and yields hampered its second-quarter results; liquidity has tightened, and refinancing options are narrow. China Vanke Co. Ltd. (China; real estate) was downgraded to 'BB-' from 'BB+' because of declining contracted sales in 2024-2025 and deteriorating liquidity amid the weak property market, as homebuyer sentiment remains tepid.
Data from Feb. 3, 2020, to Sept. 30, 2024. Includes sovereigns and rating actions on subsidiaries only if there was no rating action on the parent.

Ratings

EM Downgrade Potential | Regional Negative Bias

- **LatAm remains the region with the highest negative bias among EMs,** with 21%, similar to the previous month. All regions' downgrade potentials remained, however, comfortably below their five- and 10-year averages.

- **Chemicals, packaging; metals, mining, and steel; and retail** are the only three sectors (out of 18) **displaying a negative bias higher than the historical average.** During the month, the retail sector's negative bias increased following the outlook revision on China Tourism Group Corp. Ltd. to negative, as its duty-free business suffers from weak discretionary spending; transportation downward potential increased as Azul S.A., besides being downgraded, was assigned a negative outlook on weakening cash flow and long-term financing access; the oil and gas sector's negative bias decreased after Petroperu S.A. was removed from negative CreditWatch on a new supportive government decree.

LatAm has the highest downgrade potential (negative bias [%])

■ 10-Year Average ■ 5-Year Average ■ August 31, 2024 ■ September 30, 2024

Rating Actions | Weakest Links And Defaults

EM weakest links remain constant at four in September

■ Weakest links count (left scale) —— Weakest link share of speculative-grade population (%) (right scale)
Data as of Sept. 30, 2024. Parent only. Weakest links are defined as issuers rated 'B−' or lower with negative outlooks or ratings on CreditWatch with negative implications. Source: S&P Global Ratings Credit Research & Insights.

Default rate this month (as of August 2024)

—— EM Asia (excl. China) —— EEMEA —— LatAm —— EM (excl. China)

3.09
2.40
Excluding China. CreditPro data as of August 31, 2024. Default rates are trailing 12-month speculative-grade default count divided by trailing 12-month speculative-grade issuer count. Excludes sovereigns. Sources: S&P Global Ratings Credit Research & Insights and S&P Global Market Intelligence's CreditPro®.

- **Weakest links remained unchanged at four issuers** in September, representing 1.1% of the speculative-grade rated spectrum. Three of the weakest links are in Brazil, two of which are transportation companies.

- **Default rates.** The August default rate (excluding China) was 2.4% similar to the one in the previous month. Recently, the composite index has been mainly driven by LatAm, where all 2024 defaults took place so far. The pace of defaults in this region was 3.09% in August, decreasing from its 2023 peak of 3.90% in November.
