

The Ratings View

March 19, 2025

This report does not constitute a rating action.

Key Takeaways

- We think there's a 25% probability of a U.S. recession starting in the next 12 months.
- Tariff uncertainty is clouding the outlook for corporate earnings.
- Companies may be underestimating their exposures to physical climate risks.

S&P Global Ratings Economics now believes there's a 25% probability of a U.S. recession starting in the next 12 months.

and the manufacturing sector--which had seen early signs of a cyclical rebound--took a step back. The evolution of the hard data, by itself, points to low risk of a U.S. recession this year. However, given the rising risk of persistent supply shocks and negative sentiment, our subjective assessment is that there's a 25% probability of a U.S. recession starting in the next 12 months.

Companies may be underestimating their exposures to physical climate risks if they fail to consider value-chain exposures in their risk analyses. In turn, they may also be underestimating potential operational and financial impacts. All sectors inherit at least some physical climate risk exposures from their value chains, including those with relatively limited direct risk exposure - but most exposed are those that rely on climate sensitive upstream sectors. Whether physical climate risks embedded in value chains have material credit impacts depends on many issuer specificities.

Companies inherit physical climate risk exposures through their value chains

U.S., both by number and defaulted debt amount, for the first time in over two years. By sector, 57% of the defaults in February occurred in the consumer products and media and entertainment sectors, with two each, while two-thirds of the defaulted debt came from the utilities sector. Distressed exchanges continue to be the primary reason for defaults, accounting for six in February.

Downside risks for emerging market (EM) economies are increasing given the high level of unpredictability in U.S. trade policy and rising concerns over U.S. growth. While more tariff announcements are expected in the coming weeks, the uncertainty alone is likely to dampen investment. The macroeconomic impact of U.S. tariffs on aluminum and steel imports starting March 12 on most economies is likely to be limited, although certain sectors and firms will be affected. Aluminum prices rose in February due to pre-tariff stockpiling; however, we expect the rise in prices to be temporary. Reciprocal tariffs are expected to take effect on April 2. Asian EMs, with trade surpluses and wider tariff differentials with the U.S. face greater risk, while most of Latin America (LatAm) and EM Europe, the Middle East, and Africa (EMEA) are less exposed due to trade deficits and smaller tariff gaps.

Structured Finance

- **U.S. Auto ABS:** Here are a couple "Key Takeaways" from a recent commentary:
 - In January 2025, U.S. prime auto loan ABS losses declined slightly (76 bps) relative to December (80 bps) thanks to a higher recovery rate (51.31%, up from 49.85%). In addition, losses were stable with year-ago levels. While 60-plus-day delinquencies declined slightly from the prior month and prior year, at 60 bps, they are at their second-highest January level since 2011.
 - Subprime auto loan ABS losses increased (9.44%) relative to December (9.22%) despite a higher recovery rate (33.30% versus 30.41%). On a year-over-year basis, losses were nearly stable. Similar to prime, 60-plus-day delinquencies finally retreated to 6.22% from 6.40% for December 2024 and 6.31% a year earlier; they remained at their second-highest January level in our database going back to January 2006.
 - On March 10, 2025, we published "[U.S. Auto Loan ABS Tracker: January 2025 Performance](#)".
- **Australian RMBS:** See: "[How Will Ex-Tropical Cyclone Alfred Affect Australian RMBS?](#)" (published March 11, 2025).
- **Dutch Covered Bonds:** Here are a few "Key Takeaways" from a recent commentary:
 - Dutch covered bond issuance in 2024 exceeded the past decade's average and outpaced the growth of European benchmark issuances.
 - Asset-liability mismatch continues eroding excess spread in Dutch programs, but the overcollateralization buffer provides a safe cushion around the 'AAA' ratings on the covered bonds.
 - The key challenge for Dutch residential housing is unchanged: the supply side struggles to keep up with rising demand, thereby keeping homes at increasingly hard-to-afford levels.
 - On March 11, 2025, we published "[Dutch Covered Bond Market Insights 2025](#)".
- **Australian and New Zealand Small-Ticket Commercial Real Estate Assets:** Small-ticket commercial mortgage-backed securities are gaining attention as small commercial property lending becomes a growing segment for the nonbank lending sector. For these lenders, securitization serves as a crucial source of funding. In this report, we explain its analytical approach to assessing the small commercial property loans included in collateral pools backing Australian and New Zealand structured finance transactions and answers some frequently asked questions. See the recent "[Credit FAQ: How We Analyze Small-Ticket Commercial Real Estate Assets In Australian And New Zealand Structured Finance](#)" published March 12, 2025.
